

DEPRAG CZ **Your Partner for Automation**

The company DEPRAG is a world leader in customer solutions for industrial automation. Today DEPRAG is represented in the majority of the world's developed industrial countries through its subsidiaries and exclusive sales partners. The subsidiary DEPRAG a.s. has been supporting customers in Central and Eastern Europe since 1998, particularly specialising in industrial automation.

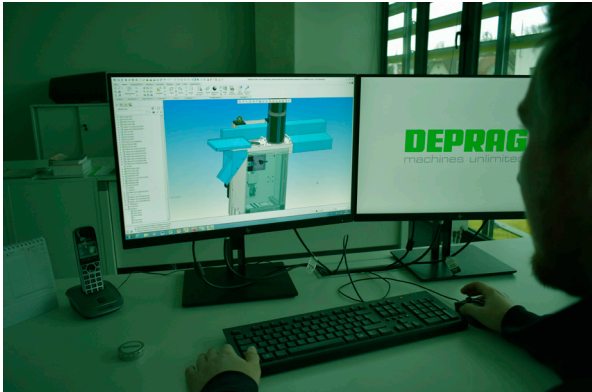

- Robot guided work stations for grinding and polishing in production processes
- Assembly of special machines and production lines
- Design and manufacture of assembly lines for handheld assembly
- A wide range of components for automation
- Design of special equipment
- Customised end effectors for robotic tooling
- Processing and feeding

Development, design, production, service and calibration in DEPRAG CZ facilities

Our components = our know-how

Key components, integral to our customer solutions, are the results of in-house development and customer specifications. As a global player, we keep up to date with the latest trends and innovations.

In-house production

Thanks to our in-house production facilities we can guarantee the manufacture of key components, special machines and robot guided work stations. We can provide thermal hardening treatments in our own hardening shop for components which are subject to operational wear. We are therefore able to guarantee production from A to Z all under one roof.

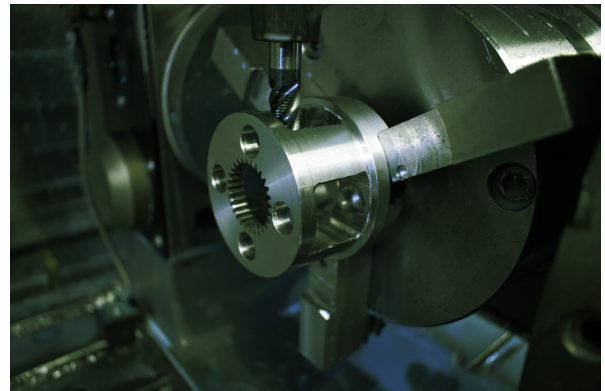

Service support for reliable operation of your technology

Following purchase, we provide the essential services needed to keep your technology running, such as calibrations, verification, analysis of screw joints and much more. We even offer an on-site calibration service.

Individual consultation for your requirements

Our team of technical advisors is always on hand to fulfil individual requirements for the enhancement of your production processes. Our creative designers, electro project designers and programmers use their specialised know-how to create a project plan for your technical solution. They draw on their knowledge of the functional advantages of latest technologies to provide an appropriate quotation.

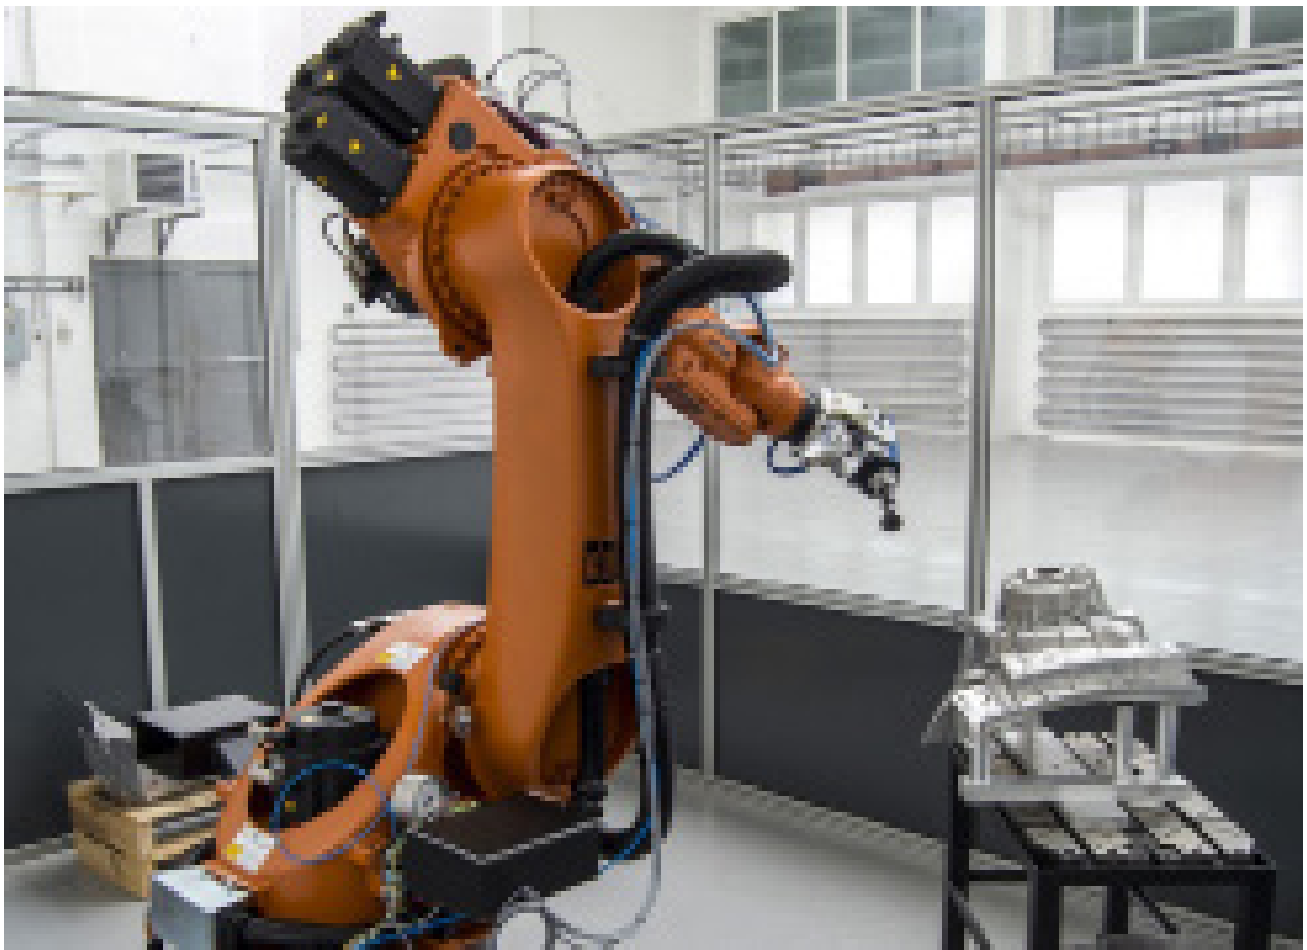

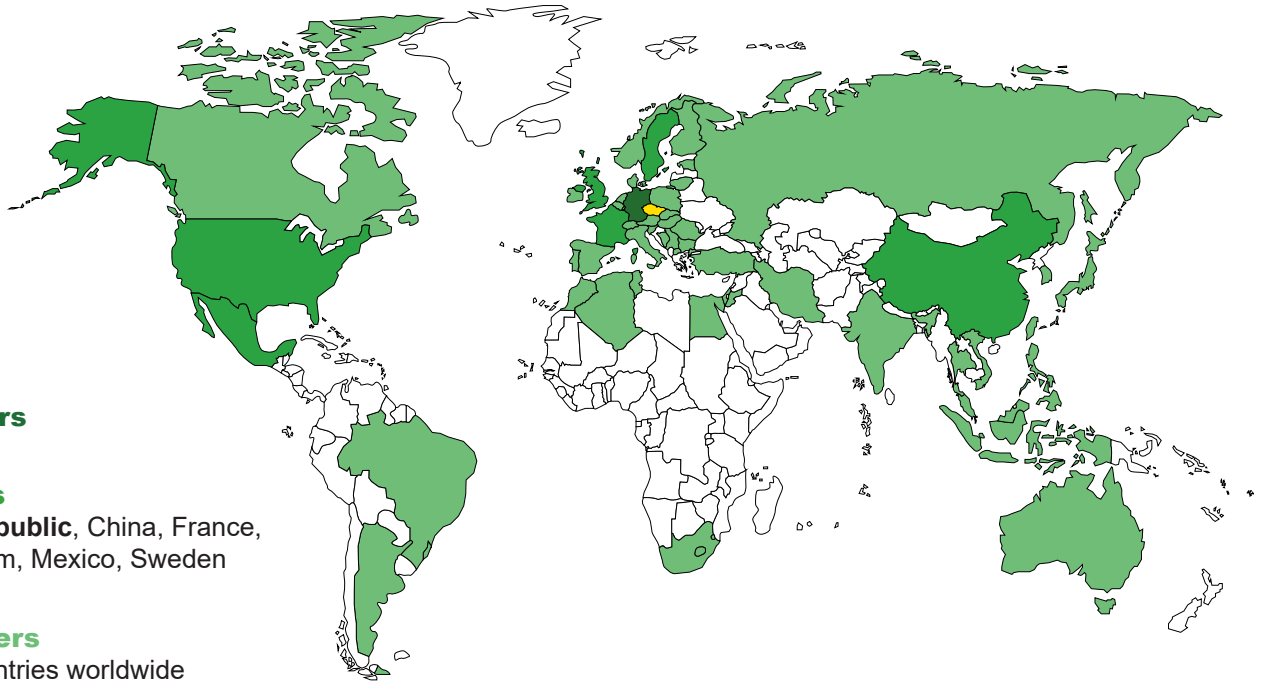

Technical support from start to finish

Our project team can provide support in the monitoring of parameters and adoption of your new technology, including specialist installation and activation at your production site. Of course, this support also includes training for operating and maintenance personnel and the handover of technical documentation, along with any testing required.
